Mini MBA: Oil & Gas and Energy Business

The global energy sector is undergoing profound transformation. Emerging technologies like hydraulic fracturing and renewable resources, environmental challenges, increased competition, and complex trades all make value creation challenging. This Mini MBA program offers a comprehensive, executive-level immersion into the oil, gas, and energy industries—covering upstream operations, supply chain dynamics, project finance, strategic analysis, and future energy trends. Participants will gain the tools, frameworks, and insights needed to lead effectively in a volatile, carbon-constrained world.

 LOCATION

Dubai, UAE

London, UK

Miami, USA

Kuala Lumpur, Malaysia

COURSE OBJECTIVES

- Understand the full value chain of oil and gas—from subsurface to market.
- Understand the emergence of renewable industry
- Apply financial and economic principles to energy project evaluation.
- Navigate supply chain complexities and logistics in global energy markets.
- Assess strategic positioning of energy firms.
- Evaluate energy investments under uncertainty using decision-analytic tools.
- Interpret policy, ESG, and geopolitical trends shaping the future of energy.

Training Methodology

This course provides comprehensive learning experience that integrates the instructor's firsthand experience in international energy companies with a robust theoretical framework. Drawing from years of practical experience in the oil & gas sector, the instructor brings real-world insights and industry best practices to the discussions.

- Executive-style lectures with interactive discussions
- Case studies from global oil and gas projects
- Hands-on exercises in financial modelling and strategic planning
- Group scenario planning and decision simulations
- Use of tools like Monte Carlo simulation, decision trees, and real options

Organisational Impact

Participants learn about the strategic view of energy business, economic valuation and risk assessment processes and techniques within the global Oil & Gas industry, this

- Enhances strategic agility and investment discipline
- Strengthens risk governance and capital allocation frameworks
- Builds cross-functional understanding across technical, financial, and policy domains
- Enhances the knowledge and skills of leaders to respond to energy transition pressures and market volatility

Who Should Attend?

- Energy executives and senior managers
- Project finance and investment analysts
- Petroleum engineers and operations leaders
- Supply chain and logistics professionals
- Policy advisors and regulatory specialists
- Business development and strategy professionals

Day 1

The Oil & Gas Industry – Strategic Foundations

- Hydrocarbon formation and their production
- Global reserves, production trends, and supply-demand dynamics
- The evolving global energy mix: hydrocarbons, renewables, and transition fuels
- Natural gas and petroleum products
- Exploration, development and production lifecycle
- The Shale Revolution and its global impact
- Value creation through refining and gas processing

Day 2

Supply Chain, Logistics, and Commercialization

- Field development and reservoir management economics
- Integrated supply chain design in oil and gas
- Strategic network decisions and infrastructure optimisation
- Current challenges: decarbonisation, digitalisation, and resilience
- Transportation modes and performance metrics
- Natural gas business: LNG, GTL, and pipeline strategies
- Renewable energy resources: Solar and Wind
- Sales, marketing, and commercial contracts in petroleum products

Day 3

Project Finance, Economics, and Investment Evaluation

- Economic principles of upstream and midstream projects
- Energy commodity markets and pricing mechanisms
- Profitability studies and investment screening
- Project selection criteria and measures of investment analysis
- Sensitivity analysis and scenario modelling
- Financial performance management in energy firms
- Derivatives and hedging in energy markets
- Introduction to Monte Carlo simulation and probabilistic valuation

Day 4

Strategic Analysis and Business Competition

- Strategic interests of IOCs vs NOCs
- Value chain analysis and competitive advantage frameworks
- Strategic challenges: ESG, carbon markets, and stranded assets
- Fiscal regimes: royalties, taxes, PSCs, and hybrid models
- Strategic project evaluation using real options
- Risk and opportunity mapping across energy portfolios
- Crude oil and natural gas pricing mechanism and market behaviour

Day 5

Future Energy Landscape and Decision-Making Under Uncertainty

- Future prospects for oil, gas, and low-carbon energy
- Carbon trading markets
- Renewable energy: wind turbines and solar panels
- Evaluating commercial viability of emerging energy projects
- Geopolitics and its influence on energy markets
- The peak oil debate and energy transition scenarios
- Advanced risk management: Models and Quantification
- Practical perspectives on uncertainty and investment strategy

BABAK JAFARIZADEH

Dr. Babak Jafarizadeh is a senior consultant and engineering economist who views engineering as the pursuit of economic solutions to technical challenges in an uncertain world. With extensive experience in the oil and gas industry, he has served as a senior economic analyst supporting multi-million-dollar investment decisions for projects across the globe.

Since 2019, Dr. Jafarizadeh has worked as a senior consultant for leading training and consulting companies, while also holding academic appointments at several prestigious institutions — including Heriot-Watt University in the UK (Assistant Professor), the University of California, Berkeley (Lecturer at the Fung Institute for Engineering Leadership), and previously the University of Greenwich (Senior Lecturer). His earlier industry experience includes serving as a Senior Economic Analyst with Equinor (formerly Statoil) in Norway and the USA.

Dr. Jafarizadeh holds a PhD in Petroleum Engineering with a concentration in Investment and Decision Analysis from the University of Stavanger (in collaboration with the University of Texas at Austin), as well as an MSc in Financial Engineering and a BSc in Industrial Engineering. He is an active member of several professional associations, including the Society of Petroleum Engineers (SPE), the Institute for Operations Research and the Management Sciences (INFORMS), and the European Association of Geoscientists and Engineers (EAGE).

His teaching and research interests lie at the intersection of decision analysis and corporate finance, with particular applications in engineering and the energy industry. He has designed and delivered numerous professional training courses, such as Advanced Financial Modelling for Oil and Gas Professionals, Advanced Project Economics, Oil and Gas: Markets, Trading, Pricing and Economic Frameworks, and Energy Economics. Dr. Jafarizadeh is also the author of the book *Economic Decision Analysis (for Project Feasibility Studies)* and continues to contribute to both academia and industry through research, consulting, and executive education. His areas of expertise include petroleum economics, investment and decision analysis, project feasibility studies, corporate finance, and financial modelling for energy projects.
