

LNG Value Chain: Markets, Trading, Operations & Energy Transition

LNG Value Chain:

Markets, Trading, Operations & Energy Transition

The LNG Value Chain: Markets, Trading, Operations & Energy Transition course offers a comprehensive exploration of the global LNG sector, blending technical, commercial, and geopolitical insights to equip participants with an integrated understanding of this dynamic industry. Designed for professionals across the energy value chain, the course examines LNG's pivotal role in global energy markets and its evolving contribution to the energy transition. Participants will analyse market trends and forecasts to 2050, assess LNG's decarbonisation potential, and evaluate the strategies of leading exporting and importing nations. Through in-depth sessions covering the full LNG value chain—from upstream production and liquefaction to shipping, regasification, and trading—attendees will gain the skills to interpret contracts, optimise cargo economics, and manage market and operational risks. The course combines expert-led instruction with practical case studies on market analysis, demurrage claims, and tender evaluation, ensuring a strong balance between strategic insight and hands-on application in today's fast-changing LNG landscape.

LOCATION

LONDON

BUENOS AIRES (COURSE FOCUS ON ARGENTINA)

SANTIAGO DE CHILE (COURSE FOCUS ON CHILE)

BOGOTA (COURSE FOCUS ON COLOMBIA)

LONDON PETRO ACADEMY
Empowering Professionals for a Sustainable Future

Foundations

Gain a comprehensive understanding of the LNG sector, including its technological, economic, and geopolitical dimensions.

Forecasting

Evaluate global LNG market trends and projections up to 2050 to anticipate changes in demand, supply, and pricing.

Decarbonisation

Examine LNG's evolving role in the global shift toward cleaner energy and its integration into net-zero strategies.

Geopolitics

Understand the strategic approaches of major LNG-exporting and importing nations and their impact on market balance.

Integration

Explore each stage of the LNG value chain—from upstream production and liquefaction to shipping, regasification, and delivery.

Contracting

Develop skills to interpret and negotiate key LNG agreements, including long-term contracts and spot MSPAs.

Profitability

Learn to calculate, evaluate, and optimise LNG cargo economics to enhance commercial decision-making.

Risk Management

Identify and mitigate risks in physical LNG trading through effective risk control and portfolio strategies.

Hedging

Utilise financial instruments and paper market tools to hedge against price volatility and market exposure.

Application

Build hands-on expertise through case studies covering market analysis, demurrage claims, and tender evaluation.

Course Objectives

LONDON PETRO ACADEMY
Empowering Professionals for a Sustainable Future

Day 1

The Stakes of LNG in the Energy Transition

- 2026 Hot topics
- Impact of US tariffs on global trade: Spot trading patterns, commercial talks Canada, Argentina, Mozambique: New momentum for US contenders?
- Supply-Demand: Impacts of AI and the end of hydrogen hype.
- Shipping: Is a vessel glut looming?
- Why LNG ? Technology, Economics & Geopolitics
- Characteristics, Composition, Boil-off, Ageing, Units & Conversions
- 8 Decades of LNG : From the 1960's pioneers to the 2020's disrupters
- Global LNG Today : Key Figures, Orders of Magnitude, Global Trends
- LNG for 2030-2050 : A Bridge Fuel for Electrification and Coal Phase-Out
- LNG Decarbonisation: Reducing Emissions, Synergies with Hydrogen & E-Fuels
- Country Focus: 10 LNG Exporters and 20 LNG Importers – Strategies and Rationale
- LNG Fundamentals & Big Data: How to Navigate in a Complex Picture
- Case Study: Play the Analyst (using 2024-25 headlines relevant to UK & EU27)

Day 2

The LNG Value Chain: Infrastructures, Contracts & Operations

- Upstream: the NOC Model vs. the American Model
- Liquefaction: A High-Tech, CAPEX-intensive Industry
- LNG Long Term Contracts: Typical Features
- LNG Shipping: Spot Market, Ship Chartering (TCP, VP)
- LNG Transfer & Storage : Technical Solutions (Tanks, FSUs, FSRUs)
- Regassification and Sendout : From Constraints to Contracts
- Ship-To-Ship, Transshipment, Reloading: Upsides and Limitations
- Small-Scale LNG, LNG Bunkering
- Ship to shore Compatibility, Operations, Measurement & Testing
- Case Study: Isle of Grain LNG terminal – why Centrica bought it in 2025 and how was it priced ?

Day 3

Trading & Hedging LNG: From Physical to Paper

- The Physical LNG Trading Ecosystem: Portfolio Players, Traders & Brokers
- LNG Pricing: Brent, JKM, TTF, NBP & Other Indexes
- Netbacks, Cargo Economics & Voyage Calculations
- Extracting Extrinsic Value from a Global LNG Portfolio
- Spot LNG MSPAs: Principles, Discrepancies, Key Negotiation Points
- LNG Physical LNG Risks : Failure to Take, Failure to Deliver, Off Spec, Force Majeure Cargo
- Financing: SBLCs
- Hedging LNG Trades : Rationale & Principles, Paper Markets (JKM, TTF, FFA's)
- Case Study : Egyptian Tender
