COURSE OVERVIEW

This highly focused Corporate Power Purchase Agreements course provides a practical, deal-oriented overview of how PPAs are structured, negotiated and assessed in today's rapidly evolving clean-energy markets. It explains how corporate PPAs give both independent power producers and large buyers long-term certainty over price and volume, and how different structures allocate risk between the parties. Participants are introduced to the legal, financial and technical architecture of physical and financial PPAs, including tariff structures based on costs vs. market price, and the implications for both sellers and buyers. The course dissects real PPA contracts, examines key clauses and "hidden pitfalls", and places individual PPA terms within the wider project and financing framework to understand bankability. Through global case studies, group risk-allocation exercises and review of real-world PPA provisions, delegates develop a clear, actionable understanding of what makes a corporate PPA robust, financeable and aligned with stakeholder objectives.

COURSE OBJECTIVES

LONDON PETRO ACADEMY
Empowering Professionals for a Sustainable Future

By the end of this course, participants will have a comprehensive understanding of the components of corporate PPAs and how they fit within the broader contractual and financing framework of a renewable project. They will be able to distinguish between physical and financial PPAs, explain basic types and key features (such as sleeved and synthetic PPAs, contracts for difference and various tariff structures), and appreciate the impact of cost-based versus market-linked pricing on risk and returns. Delegates will learn best practices for drafting, negotiating and managing PPAs, including timing and milestones, pre- and post-COD obligations, delivery and metering details, and curtailment and deemed energy provisions. They will analyse case studies to identify successful structures and common pitfalls, and understand what provisions a PPA must contain to be considered “bankable” by lenders, including tariff design, allocation of operational and regulatory risks, and treatment of events beyond business-as-usual such as force majeure, changes of law and default/termination scenarios.

Course audience

This course is designed for professionals involved in procuring, developing, financing or advising on corporate renewable energy deals who need a solid, practical grasp of PPA structures and bankability requirements. It is particularly relevant for corporate procurement and contract managers, project developers and sponsors, OEM manufacturers, EPC contractors and O&M service providers, IPPs, utilities and grid operators, as well as private equity and institutional investors. Development finance institutions, commercial lenders, and legal, technical and insurance advisors will benefit from the detailed treatment of risk allocation and lender requirements. The course is also suitable for government officials and regulators, oil and gas upstream companies, petrochemical and process industry firms, and business developers and sales managers seeking to understand how corporate PPAs can support decarbonisation strategies while managing price, volume and counterparty risk.

The corporate PPA in context

- Scale of the corporate PPA market compared to general market size
- Who is buying who is selling what?
- Drivers of corporate PPAs
- Wholesale prices and Interconnection capacity as a mega driver

Basic types and key features of corporate PPAs

- Existing assets versus newly developed assets
- Sleeved and synthetic PPAs
- Contract for difference
- Bundled, certificates only or electricity only PPA
- Behind the meter or 'on-site' PPAs
- Fully contracted asset versus partly merchant asset
- Pooling different load profiles as a buyer group
- Multiple Corporate PPAs and first right of power

Overall structure of a PPA

- Definition of commercial terms
- Risk to bankability
- Obligations and Undertakings of each party
- Conditions Precedents to be on the safe side
- PPA Definitions and Annexes

PPA Timing and Milestones

- From Signing to Expiry Date
- Scheduled Dates, Actual Dates and Events
- Changing Rights and Obligations at each dates
- Release of obligations in certain events
- Pre-COD and Post-COD periods
- Periods to exercise rights, notify and cure
- Termination rights not meeting milestones

Pre-Commercial Operation Date Period

- Order of execution of other project contracts
- Back to back requirements with the EPC contractor
- Development bonds, Performance Bonds and Letter of credits
- Definitions of achieved, declared, contracted and minimum capacities
- Delay and Performance Liquidated Damages – calculation and different structures

Post-Commercial Operation Date Period

- Delivery Point, Metering and Losses – the devil is in the detail
- Invoicing, Billing and Payments procedures or show me the money
- Impact on working capital requirements and bankability
- Availability, Planned Maintenance Outages and requested changes
- Prudent Utility Practice and manufacturer warranties
- Allowed Grid Unavailability Periods, Curtailment and Deemed Energy provisions

PPA tariff structures

- Understanding Levelized Cost of Electricity, Cost of Capital and their impact on tariffs
- Tariff Structures for intermittent power generation technologies
- Take-or-Pay versus Take-and-Pay contracts
- The rationale for indexation and escalation of local, foreign inflation and currencies
- Discount to market indexes
- Price collar structures
- Seasonal weighting factors in a PPA
- Locational Marginal Pricing and grid charges

Specific considerations for corporate PPAs

- Forecast wholesale price uncertainty and fixing the strike price
- Counter-party risk and long term creditworthiness of the generator and off-taker
- Power consumption load profile and changes over time
- Additionality and Guarantee of Origin
- Scheduling and balancing risks
- Wholesale power price linked PPA

Events beyond Business-As-Usual

- Dispute Resolution, Cure Periods and Arbitration
- Lenders Step-in Rights
- Political and Natural Force Majeure Events
- Changes of Law and Stabilization clauses
- Consequences of Force Majeure and Changes of Law
- Seller or Buyer Event of Default
- Termination rights of PPA by either side
- Termination payment pricing methodology

This course is available In-House and can be tailored to your specific requirements.
